Commentary

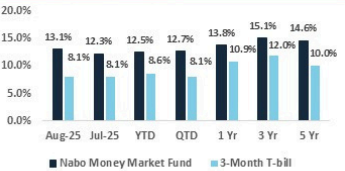

The fund posted a full year net Annualized return of 13.1% in August 2025 surpassing the benchmark by over 500 bps, driven by strategic allocation across various securities in the cash and equivalents asset class, government securities and corporate debt.

The portfolio's exposure to government securities increased during the month, with allocations along the yield curve allowing the fund to register improved performance during the month. This is a strategic shift given the current low interest-rate environment and aims to maximize return while still observing a low-moderate risk profile.
